

## Release 4.1.0 is now available

In addition to the features discussed below, releases 4.0.8 and 4.0.9 of IntelliPad provide enhanced sorting for standard views such as the Review for the data steward, as well as other administrative improvements.

### 1. New and Improved Marketing Tab in Outlook

New features allow installation-level options as to which parts of the Marketing Tab are shown. There are fewer button clicks for end-users with the upgraded Outlook Marketing Tab. Previous versions of IntelliPad required a "Save" button to be clicked in this window. Now, saving or closing the Outlook contact form results in the changes being saved. However, users have the option of discarding the changes if desired.

### 2. IntelliTab is now available for Integration with Other Databases

A new IntelliPad option, if desired by the firm, provides direct communication from within Outlook to other databases in the firm. An example "Case Management" application is shown below:
